1. _____ computing refers to applications and services that run on a distributed network using virtualized resources.
a) Distributed
b) Cloud
c) Soft
d) Parallel

2. Point out the wrong statement.
a) The massive scale of cloud computing systems was enabled by the popularization of the Internet
b) Soft computing represents a real paradigm shift in the way in which systems are deployed
c) Cloud computing makes the long-held dream of utility computing possible with a pay-as-you-go, infinitely scalable, universally available system
d) All of the mentioned

3. _____ as a utility is a dream that dates from the beginning of the computing industry itself.
a) Model
b) Computing
c) Software
d) All of the mentioned

4. Which of the following is essential concept related to Cloud?
a) Reliability
b) Productivity
c) Abstraction
d) All of the mentioned

5. Point out the wrong statement.
a) All applications benefit from deployment in the cloud
b) With cloud computing, you can start very small and become big very fast
c) Cloud computing is revolutionary, even if the technology it is built on is evolutionary
d) None of the mentioned

6. Which of the following cloud concept is related to pooling and sharing of resources?
a) Polymorphism
b) Abstraction
c) Virtualization
d) None of the mentioned

7. _____ has many of the characteristics of what is now being called cloud computing.
a) Internet
b) Softwares
c) Web Service
d) All of the mentioned

8. Which of the following can be identified as cloud?
a) Web Applications

b) Intranet
c) Hadoop
d) All of the mentioned

9. Cloud computing is an abstraction based on the notion of pooling physical resources and presenting them as a _____ resource.
a) real
b) virtual
c) cloud
d) none of the mentioned

10. Which of the following is Cloud Platform by Amazon?
a) Azure
b) AWS
c) Cloudera
d) All of the mentioned

11. Which of the following was one of the top 5 cloud applications?
a) Cloud backup
b) Web applications
c) Business applications
d) All of the mentioned

12. Point out the correct statement.
a) Google's cloud includes perhaps some 10 data centers worldwide
b) Flipkart.com's infrastructure was built to support elastic demand so the system could accommodate peak traffic
c) Data centers have been sited to optimize the overall system latency
d) All of the mentioned

13. Which of the following benefit is related to creates resources that are pooled together in a system that supports multi-tenant usage?
a) On-demand self-service
b) Broad network access
c) Resource pooling
d) All of the mentioned

14. The _____ is something that you can obtain under contract from your vendor.
a) PoS
b) QoS
c) SoS
d) All of the mentioned

15. Point out the wrong statement.
a) Internet consumes roughly 1 percent of the world's total power
b) The cost advantages of cloud computing have enabled new software vendors to create productivity applications

c) A client can provision computer resources without the need for interaction with cloud service provider personnel
d) None of the mentioned

16. All cloud computing applications suffer from the inherent _____ that is intrinsic in their WAN connectivity.
a) propagation
b) latency
c) noise
d) all of the mentioned

17. Cloud computing is a _____ system and it is necessarily unidirectional in nature.
a) stateless
b) stateful
c) reliable
d) all of the mentioned

18. Which of the following is the most important area of concern in cloud computing?
a) Security
b) Storage
c) Scalability
d) All of the mentioned

19. You can't count on a cloud provider maintaining your _____ in the face of government actions.
a) scalability
b) reliability
c) privacy
d) none of the mentioned

20. Which of the following architectural standards is working with cloud computing industry?
a) Service-oriented architecture
b) Standardized Web services
c) Web-application frameworks
d) All of the mentioned

21. Which of the following is one of the unique attributes of Cloud Computing?
a) utility type of delivery
b) elasticity
c) low barrier to entry
d) all of the mentioned

22. Point out the correct statement.
a) Service Level Agreements (SLAs) is small aspect of cloud computing
b) Cloud computing does not have impact on software licensing
c) Cloud computing presents new opportunities to users and developers
d) All of the mentioned

23. Applications that work with cloud computing that have low margins and usually low risk are _____
a) high touch
b) low touch
c) moderate touch
d) all of the mentioned

24. A service that concentrates on hardware follows the _____ as a Service model.
a) IaaS
b) CaaS
c) PaaS
d) All of the mentioned

25. Point out the wrong statement.
a) A cloud is defined as the combination of the infrastructure of a datacenter with the ability to provision hardware and software
b) High touch applications are best done on-premises
c) The Google App Engine follows IaaS
d) None of the mentioned

26. When you add a software stack, such as an operating system and applications to the service, the model shifts to _____ model.
a) SaaS
b) PaaS
c) IaaS
d) All of the mentioned

27. Which of the following is the most refined and restrictive service model?
a) IaaS
b) CaaS
c) PaaS
d) All of the mentioned

28. _____ is a pay-as-you-go model matches resources to need on an ongoing basis.
a) Utility
b) Elasticity
c) Low barrier to entry
d) All of the mentioned

29. _____ feature allows you to optimize your system and capture all possible transactions.
a) scalability
b) reliability
c) elasticity
d) none of the mentioned

30. _____ enables batch processing, which greatly speeds up high-processing applications.

a) Scalability
b) Reliability
c) Elasticity
d) Utility

31. Amazon Elastic Compute Cloud (EC2) is primarily considered which type of cloud computing model?

A. Software as a service (SaaS)
B. Platform as a service (PaaS)
C. Infrastructure as a service (IaaS)
D. None of the above

32. What is a public cloud?

A. A cloud formation that can be seen across the globe
B. A cloud service that can only be accessed from a publicly shared computer
C. A multi-tenant cloud environment accessed over the internet
D. A cloud environment owned, operated and controlled by a public company

33. Which of the following statements could be used to describe a private cloud deployment?

A. A cloud environment maintained within an enterprise's own data center
B. A private environment within a third-party or public cloud provider's architecture
C. A cloud service inaccessible to anyone but the cultural elite
D. Both 1 and 2

34. What is a hybrid cloud?

A. A blend of public and private cloud services with orchestration between them
B. A cloud service deployed across multiple offices or locations
C. A blend of private cloud and legacy on-premises hardware
D. None of the above

35. Which of these options is not a PaaS offering?

A. IBM App Mix
B. Azure App Service
C. AWS Elastic Beanstalk
D. Google App Engine

36. According to what's known as the shared responsibility model in public cloud, which of the following components are cloud customers -- not providers -- responsible for?

A. The security and maintenance of underlying hardware, such as servers
B. The physical security of cloud data centers
C. The security of users' data
D. The provider is responsible for all components above

37. Which of the following acronyms refers to a software distribution model in which a cloud provider manages and hosts an app that users access via the internet?

A. IaaS
B. PaaS
C. SaaS
D. None of the above

38. What does it mean when a public cloud provider has an availability of five nines?

A. No downtime
B. Unavailable for potentially five minutes a day
C. Unavailable for potentially five minutes a month
D. Unavailable for potentially five minutes a year

39. When an enterprise migrates an application to the cloud as is, without making any modifications, what is this called?

A. Rehost
B. Refactor
C. Rearchitect
D. Remove

40. Which of the following tools does not offer features to track and manage public cloud costs?

A. Azure Cost Management
B. RightScale
C. AWS Glue
D. CloudHealth

41. Which of the following is one of the properties that differentiates cloud computing?
a) scalability
b) virtualization
c) composability
d) all of the mentioned

42. Point out the correct statement.

a) Cloud computing is a natural extension of many of the design principles, protocols, plumbing, and systems
b) Platforms are used to create more easy software
c) All SLAs are enforceable as contracts
d) All of the mentioned

43. A _____ is a cloud computing service that is both hardware and software.
a) service
b) platform

c) model
d) all of the mentioned

44. Cloud computing doesn't require that _____ and software be composable.
a) cloud
b) database
c) hardware
d) all of the mentioned

45. Point out the wrong statement.
a) Virtual appliances are becoming a very important standard cloud computing deployment object
b) Cloud computing requires some standard protocols
c) Cloud computing relies on a set of protocols needed to manage interprocess communications
d) None of the mentioned

46. The most commonly used set of protocols uses _____ as the messaging format.

a) XML
b) JSON
c) BSON
d) All of the mentioned

47. Which of the following language is used to manage transactions?
a) WSDL
b) XML
c) SOAP
d) All of the mentioned

48. Which of the architectural layer is used as backend in cloud computing?
a) client
b) cloud
c) soft
d) all of the mentioned

49. A _____ cloud requires virtualized storage to support the staging and storage of data.
a) soft
b) compute
c) local
d) none of the mentioned

50. A _____ system uses components to assemble services that can be tailored for a specific purpose using standard parts.
a) reliable
b) scalable
c) composable

d) none of the mentioned

51. A _____ service provider gets the same benefits from a composable system that a user does.
a) CaaS
b) AaaS
c) PaaS
d) All of the mentioned

52. Point out the correct statement.
a) Cloud architecture can couple software running on virtualized hardware in multiple locations to provide an on-demand service
b) Cloud computing relies on a set of protocols needed to manage interprocess communications
c) Platforms are used to create more complex software
d) All of the mentioned

53. Which of the following is the property of the composable component?
a) stateful
b) stateless
c) symmetric
d) all of the mentioned

54. From the standpoint of a _____ it makes no sense to offer non-standard machine instances to customers.
a) CaaS
b) AaaS
c) PaaS
d) IaaS

55. Point out the wrong statement.
a) A cloud cannot be created within an organization's own infrastructure or outsourced to another datacenter
b) A composable component must be modular
c) A composable component must be stateless
d) None of the mentioned

56. A service provider reselling a _____ may have the option to offer one module to customize the information.

a) CaaS
b) AaaS
c) PaaS
d) SaaS

57. Which of the following is the highest degree of integration in cloud computing?
a) CaaS
b) AaaS

c) PaaS
d) SaaS

58. Which of the architectural layer is used as a front end in cloud computing?
a) client
b) cloud
c) soft
d) all of the mentioned

59. Which of the following benefit is provided by the PaaS service provider?
a) A larger pool of qualified developers
b) More reliable operation
c) A logical design methodology
d) All of the mentioned

60. Communication between services is done widely using _____ protocol.
a) REST
b) SOAP
c) RESTful
d) None of the mentioned

61. Which of the following provider rely on the virtual machine technology to deliver servers?
a) CaaS
b) AaaS
c) PaaS
d) IaaS

62. Point out the correct statement.
a) Virtual machines are containers that are assigned specific resources
b) Applications need not be mindful of how they use cloud resources
c) When a developer creates an application that uses a cloud service, the developer cannot attach to the appropriate service
d) All of the mentioned

63. Which of the following component is called hypervisor?
a) VGM
b) VMc
c) VMM
d) All of the mentioned

64. Applications such as a Web server or database server that can run on a virtual machine image are referred to as _____
a) virtual server
b) virtual appliances
c) machine imaging
d) all of the mentioned

65. Point out the wrong statement.

a) Platforms represent nearly the full cloud software stack
b) A platform in the cloud is a software layer that is used to create higher levels of service
c) Platforms often come replete with tools and utilities to aid in application design and deployment
d) None of the mentioned

66. _____ allows different operating systems to run in their own memory space.
a) VGM
b) VMc
c) VMM
d) All of the mentioned

67. Amazon Machine Images are virtual appliances that have been packaged to run on the grid of ____ nodes.
a) Ben
b) Xen
c) Ken
d) Zen

68. Which of the following offers virtual appliances, including ones based on Windows, all of which run on VMware Player?
a) Bagvapp
b) Jcinacio
c) HelpdeskLive
d) All of the mentioned

69. _____ offers various Linux distributions upon which you can build a virtual machine.
a) Bagvapp
b) Jcinacio
c) HelpdeskLive
d) All of the mentioned

70. _____ is a CPU emulator and virtual machine monitor.
a) Imaging
b) Parallels
c) QEMU
d) None of the mentioned

71. The properties necessary to guarantee a reliable transaction in databases and other applications is referred to as _____
a) BASE
b) ACID
c) ATOM
d) All of the mentioned

72. Point out the wrong statement.
a) In theory, any application can run either completely or partially in the cloud

b) The location of an application or service plays a fundamental role in how the application must be written
c) An application or process that runs on a desktop or server is executed coherently, as a unit, under the control of an integrated program
d) None of the mentioned

73. Which of the following is property of ACID principle?
a) Atomicity
b) Consistency
c) Isolation
d) All of the mentioned

74. Which of the following ACID property states that the system must go from one known state to another and that the system integrity must be maintained?
a) Atomicity
b) Consistency
c) Isolation
d) Durability

75. Point out the wrong statement.
a) Taken as a unit, “Request => Process => Response” is not an atomic transaction
b) A coherent transaction either succeeds and is enacted, or fails and is rolled back
c) When rollback is not possible due to optimistic transaction commitment in a multiuser application, durability requires correcting the condition
d) None of the mentioned

76. Which of the following component is required for both online and local data access in hybrid application?
a) local
b) cloud
c) both local and cloud
d) none of the mentioned

77. Which of the following factors might offset the cost of offline access in hybrid applications?
a) scalability
b) costs
c) ubiquitous access
d) all of the mentioned

78. An application that needed _____ storage alone might not benefit from a cloud deployment at all.

a) online
b) offline
c) virtual
d) all of the mentioned

79. The _____ property states that the system must have a mechanism to recover from committed transactions should that be necessary.
a) Atomicity
b) Consistency
c) Isolation
d) Durability

80. Which of the following property defines a transaction as something that cannot be subdivided and must be completed or abandoned as a unit?
a) Atomicity
b) Consistency
c) Isolation
d) Durability

81. IoT is a paradigm that involves ubiquitous presence in the environment.
a) True
b) False

82. _____ empowers IoT by bringing together everyday objects.
a) Intelligence
b) Connectivity
c) Dynamic Nature
d) Enormous Scale

83. The collection of data is achieved with _____ changes.
a) Intelligence
b) Connectivity
c) Dynamic Nature
d) Enormous Scale

84. The number of devices that need to be managed and that communicate with each other will be much larger.
a) Intelligence
b) Connectivity
c) Dynamic Nature
d) Enormous Scale

85. _____ Provide the means to create capability that reflects true awareness of the physical world and people.
a) Sensors
b) Heterogeneity
c) Security
d) Connectivity

86. _____ in IoT as one of the key characteristics, devices have different hardware platforms and networks.
a) Sensors
b) Heterogeneity

c) Security
d) Connectivity

87. IoT devices are naturally vulnerable to _____ threats.
a) Sensors
b) Heterogeneity
c) Security
d) Connectivity

88. Which challenge comes under IoT devices, reliable bidirectional signaling.
a) Signaling
b) Security
c) Presence detection
d) Power consumption

89. Which challenge comes under securing the information?
a) Signaling
b) Security
c) Presence detection
d) Power consumption

90. _____ gives an exact, up to the second state of all devices on a network.
a) Signaling
b) Security
c) Presence detection
d) Power consumption

91. MQTT is mainly used for _____
a) M2M communication
b) Device communication
c) Internet communication
d) Wireless communication

92. Which is an open standard?
a) CoAP
b) MQTT
c) XMPP
d) HTTP

93. MQTT is _____ oriented.
a) Data
b) Message
c) Network
d) Device

94. Who created MQTT?
a) Robert Cailliau
b) Tim Berners-Lee

c) Andy Stanford-Clark
d) Vint Cerf

95. Does MQTT support security.
a) True
b) False

96. Standard ports of MQTT are _____
a) I2C
b) SSL
c) USART
d) TCP/IP

97. Full form of MQTT _____
a) Message Queuing Telemetry Transport
b) Message Queuing Telegram Transport
c) Message Queue Telegram Transport
d) Message Queue Telemetry Transport

98. What are the key components of a M2M system?
a) Vortex DDS
b) Smart Homes
c) Sensors and Wi-Fi
d) Protocols

99. Request field is present in which message format?
a) Request message
b) Response message
c) Both request and response
d) Neither request nor response

100. URI and content type support is which protocol feature?
a) SPI
b) UDP
c) HTTP
d) CoAP

101. Arduino IDE consists of 2 functions. What are they?
a) Build() and loop()
b) Setup() and build()
c) Setup() and loop()
d) Loop() and build() and setup()

102. What is the microcontroller used in Arduino UNO?
a) ATmega328p
b) ATmega2560
c) ATmega32114
d) AT91SAM3x8E

103. What does p refer to in ATmega328p?
a) Production
b) Pico-Power
c) Power-Pico
d) Programmable on chip

104. Arduino shields are also called as _____
a) Extra peripherals
b) Add on modules
c) Connectivity modules
d) Another Arduinos

105. What is the default bootloader of the Arduino UNO?
a) Optiboot bootloader
b) AIR-boot
c) Bare box
d) GAG

106. Does the level shifter converts the voltage levels between RS-232 and transistor-transistor logic.
a) True
b) False

107. Which is the software or a programming language used for controlling of Arduino?
a) Assembly Language
b) C Languages
c) JAVA
d) Any Language

108. Do Arduino provides IDE Environment?
a) True
b) False

109. A program written with the IDE for Arduino is called _____
a) IDE source
b) Sketch
c) Cryptography
d) Source code

110. _____ are pre built circuit boards that fit on top of Android.
a) Sensor
b) Data types
c) Breadboard
d) Sheilds

111. Fog computing is also known as fogging.
a) False

b) True

112. Fog computing can be perceived in _____ and _____
a) Big data and Cloud systems
b) Big data and IoT
c) Cloud systems and IoT
d) Big data, Cloud systems and IoT

113. Fog computing has _____ and _____ plane.
a) Control and data
b) Control and Barcode
c) Barcode and Data
d) Data and cloud

114. Which of the following computing emphasizes proximity to end user?
a) Mist computing
b) Cloud computing
c) Edge computing
d) Fog computing

115. QoS stands for _____
a) Quality of storage
b) Quality of service
c) Quality of security
d) Quality of swarms

116. Does fog support IoT concepts.
a) True
b) False

117. _____ practice of using a network of remote servers hosted on the Internet of store.

a) Mist Computing
b) Fog computing
c) Cloud computing
d) Mobile cloud computing
View Answer

118. Which computing can be heavy weight and dense form of computing power?
a) Mobile Cloud computing
b) Fog computing
c) Mist computing
d) Cloud computing

119. _____ is the extension of cloud computing.
a) Mobile cloud computing
b) Mist computing

c) Fog computing
d) Cloud computing

120. _____ is medium weighted.
a) Mobile cloud computing
b) Cloud computing
c) Mist computing
d) Fog computing
